<sup>1</sup> Where matching colour matching on White (00E55) is critical, it is important that the material is purchased from the same production batch.

<sup>2</sup> These numbers are for guidance only, as the colours vary slightly from British Standard.

<sup>3</sup> Within 1 1/2 miles of shoreline.

**Substrate: 200XT Exterior** is available on Hot Dipped Zinc Galvanised Steel to BS EN 10142:1991

Overpainting of the underside of lapped edges, together with the exposed cut edge, may be advisable for some severe industrial, coastal and marine environments; as in some conditions the substrate properties are included in the total sheet life.

The standard reverse coating is specifically designed for bonding most injected insulation foams and laminating of slab.

Certain colours, in specific instances, may well have a longer period to first maintenance than shown in the table above.
